Career Objective

Versatile programmer with experience in both low-level and high-level languages with knowledge in OOP, data structures, and computer networking. I want to combine my creativity with efficiency while working in a team to satisfy given tasks. I believe my attention to detail and analytical thinking will be valuable for your business.

Technical Proficiencies

MASM – C/C++/ C# – HTML5/ CSS3 – Javascript – Swift – Java – Python

OOP – Node.js – MongoDB – Github

Education

Oregon State University - Corvallis, OR *(2017-Present)*
Bachelor of Computer Science
Straight As in all CS courses. Some of these courses include:

Data Structures – Computer Architecture and Assembly – Web Development – Computer Networking – Software Engineering

Experience

Data Structure Teacher Assistant - Corvallis, OR *(2019-Present)*
Working with a professor, I held office hours to help students with data structure concepts, bug-fixing, and best coding practices along with reviewing and grading their projects. I also proctored and graded quizzes for 30+ students.

Canvassing - Las Vegas, NV *(2018-2018)*
I chose this job because I wanted to break out of my comfort zone by going door-to-door talking with strangers. Working with a team members, I determined how to efficiently split up territory to talk with diverse people. I learned the value of communicating clearly to figure what information people wanted to know.

Projects

My Website - HTML5, CSS3, Javascript - gregoryblood.github.io
To create this site, I thought of it like a sales talk. It had to be enticing to look at, while maintaining quality information. I designed it with a minimalistic style with a limited color palette, with a goal to remove any distractions attract the viewers eyes too clickable links.

WhatToWear -HTML5, CSS3, Javascript - gregoryblood.github.io/weatherapi
I check the weather every morning to figure out what to wear but don't always know what a number like 54 degrees feels like. So to solve this problem I created a site that uses DarkSky.net's API and the device's location to display as clearly as possible, what kind of clothes to wear and 'weather' you need an umbrella or a raincoat. Some of my friends and I still use this every morning because of the everchanging Oregon weather.
